

Digital Literacy

Project Report

Name: Ishan

Registration Number:
25BAC10029

Year - 2026

Branch: BTech Electronics and
communication Spec(AI&ML)

Course Code: CSE0001

Date: 31/03/2026

INTRODUCTION

This project was completed as part of the Digital Literacy course to understand the effective and responsible use of digital tools and platforms. As a student digital ambassador, the objective was to explore various digital technologies, create a professional online presence, and understand safe online practices.

The project includes tasks such as creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and analyzing cybercrime awareness. These tasks helped in developing practical knowledge about digital communication, online safety, and professional behavior in the digital world.

TASK 1 PRESENTATION

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic highlights

key concepts such as what digital literacy is, useful digital tools, safe internet practices, and email etiquette.

The design was structured in a step-by-step format to ensure clarity and readability. It includes simple points that are easy to understand for students. While creating the infographic, I focused on maintaining a clean layout and selecting relevant content instead of overloading it with information.

One challenge I faced was choosing the right template that matched the topic, as many templates were unrelated. However, after selecting a minimal and structured design, the process became straightforward. This task helped me understand how to present information visually in an effective way.

Task-2-Portfolio

In Task 2, I created my digital portfolio by setting up accounts on GitHub and LinkedIn. GitHub is used for

managing and showcasing coding projects, while LinkedIn helps in building a professional network and online presence.

I created a GitHub profile README that includes basic information about me, my course, and my interests. On LinkedIn, I added my education details and started building my professional profile. These platforms are important for students as they are widely used by recruiters and organizations.

In the next four years, I plan to use GitHub to upload my projects and improve my coding skills, and LinkedIn to connect with professionals and explore internship opportunities. This task helped me understand the importance of maintaining a professional digital identity.

Task-3-Platforms

In Task 3, I explored coding and collaboration platforms. I used HackerRank to solve a beginner

level programming problem, which helped me understand how coding platforms work and how problems are structured.

I also created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. This form can be used to test basic knowledge of digital literacy among students. I explored features such as creating multiple-choice questions and viewing responses.

These tools are very useful for academic purposes. Coding platforms help in improving problem-solving skills, while collaboration tools like Google Forms make it easy to collect and analyze data. This task helped me gain practical experience with these platforms.

Task-4-Email-Etiquette

Task 4 focused on understanding professional communication through email etiquette and responsible social media usage. I created two formal emails: one requesting an assignment extension and another applying for an internship opportunity.

This task helped me understand the importance of using a clear subject line, maintaining a formal tone, and structuring emails properly. I also created a checklist of do's and don'ts for social media usage.

Poor digital communication can lead to misunderstandings and negative impressions. For example, using informal language in a professional email may appear unprofessional.

This task highlighted the importance of proper communication in academic and professional environments.

Task-5-Cybercrime

In Task 5, I studied UPI fraud as a common cybercrime and created a case study along with a prevention checklist. I learned how attackers use phishing links and fake payment requests to trick users into transferring money.

What surprised me most was how easily people can fall victim to such scams due to lack of awareness. Many users are unaware that receiving money does not require entering a PIN.

As a result of this task, I will be more cautious while handling online transactions and will avoid clicking on unknown links or accepting suspicious requests.

This task emphasized the importance of digital safety and awareness.

CONCLUSION

This project helped me understand the importance of digital literacy in today's world. I gained knowledge about digital tools, online platforms, and safe internet practices. The tasks provided practical experience in creating content, building a professional profile, and understanding cyber security.

Overall, this project improved my digital awareness and prepared me to use technology more responsibly and effectively in my academic and professional life.
